

Gliederung zur Vorlesung FM2

FM 2 - Flugdynamik & Flugregelung

Inhalt der Vorlesung

1 Aircraft Flight Control - Introduction

2 The Equations of Motion of an Aircraft

2.1 Overview

2.2 Background Information

Reference Frames

Summary of Nomenclature

Analogy: Translational and Rotational Motion

The Equation of Motion of a Rigid Body

The Inertia Matrix

2.3 Translational Motion

Forces due to Gravity

Angular Velocities and Euler Angle Rates

Axis Transformation

Linearization and Combination of Terms

2.4 Complete Linearized Equation of Motion

Velocity Components along Body Axis

2.5 Equation of Motion in Stability Axis System

2.6 Equation of Motion for Steady Manoeuvring Flight Conditions

2.7 Additional Motion Variables

2.8 State and Output Equation

State Equation for Longitudinal Motion

State Equation for Lateral Motion

2.10 Stability Derivatives

2.11 Thrust Effects

2.9 Obtaining Transfer Functions

-  **3 Aircraft Stability and Dynamics**
 -  -----
 -  Overview
 -  3.1 Introduction
 -  >>> Background Information
 -  Aircraft Response to Controls
 -  Inverse of a Matrix - Cramer's Rule
 -  3.4 Transfer Functions - Longitudinal Motion
 -  3.8 Transfer Functions - Lateral Motion
 -  >>> Background Information
 -  Eigenvalue, Eigenvector, Characteristic Equation
 -  The s-Plane
 -  3.2 Longitudinal Stability
 -  3.3 Static Stability
 -  >>> Short Period and Phugoid Approximation
 -  3.5 Transfer Functions - Short Period Approximation
 -  3.6 Transfer Functions - Phugoid Approximation
 -  3.7 Lateral Stability
 -  3.9 3D Approximation
 -  3D Dutch Roll Approximation
 -  3D Spiral and Roll Subsidence Approximation
 -  3.10 2D Approximation
 -  2D Dutch Roll Approximation
 -  3.11 1D Approximation
 -  >>> Commentary on Approximate Lateral Equations
 -  3.12 Uncoupling Roll and Yaw

4 A Note on Structural Flexibility (McLean)

-  **5 Disturbances Affecting Aircraft Motion (Gusts)**
 -  -----
 -  Introduction
 -  Wind Shear and Microburst
 -  Vertical Wind Gradient
 -  The Effects of Gusts on Aircraft Motion
 -  State Equation Including Gust Inputs
 -  Gust-Input Transfer Functions

6 Flying and Handling Qualities

 -----

 Introduction

 Specifications

 Flying Qualities for the Short Period Response

 Time to Double - Time to Half

 Time to Double for a Second Order System

7 Control Theory

 -----

 Contents

 7.1 Summary Diagram

 7.2 Feedback

 7.3 Control System Design

 7.4 Pole Placement

 7.5 Root Loci

 7.6 System Type and Rank --- Frequency Response

 7.7 Calculating $F(j\omega)$

 7.8 Bode Plots

 7.9 Polar Plots

 7.10 Nichols Plots

  7.11 Stability Criteria

 General Remarks

 Routh Stability Criterion

 Gain and Phase Margin

 Nyquist Stability Criterion

 Appendix: Control System Modelling

- 📄 **8 Aircraft Control**
- 📄 -----
- 📄 Overview
- 📄 8-9 Stability Augmentation Systems (SAS)
 - 📄 Pitch Rate SAS
 - 📄 Control Law
 - 📄 Additional Feedback Terms
 - 📄 Yaw Damper
 - 📄 Roll Damper
 - 📄 Spiral Mode Stabilization
- 📄 8-10 Attitude Control Systems
 - 📄 Pitch Attitude Control System
 - 📄 Roll Angle Control System
- 📄 8-11 Flight Path Control Systems
- 📄 Summary
- 📄 -----
- 📄 Note: Numbering is related to McLean's book

9 Mathematical Models of Human Pilots (McLean)

Appendix: Stability and Control Derivatives

Übungen zu MATLAB/Simulink werden passend zum Unterricht der "Flugdynamik und Regelung" eingeschoben.
