

DLR Design Challenge 2025

MedEvac: Designing the Future of Emergency Air Transport

Are you looking for new challenges and would you like to steer aeronautical engineering in new directions with your own ideas?

The German Aerospace Center (DLR) is inviting student registrations for a challenging task as part of the DLR Design Challenge 2025. This year's DLR Design Challenge invites participants to develop innovative aircraft concepts that improve medical evacuation (MedEvac) capabilities. More information about the general topic, organizational notes and a preliminary timeline can be found in the attached flyer.

Are you motivated to take up the challenge and do you want to gain new experiences in collaborative aircraft design? Would you like to get to know the DLR and also participate in an international aviation congress to present the aircraft design results?

Then get together with your fellow students and create a team. We are looking forward to your registrations!
